### **Preamble:-**

BMRCL submitted a fresh application dated 27.11.2020 read at ref (2) above seeking permission for removal of 700 trees infringing the Metro Rail Construction work Phase-2, R-6 elevated (Kothnur Depot) at Sy No. 87/3, 87/7 and 87/2 of Kothnur village as per the directions issued by the Hon'ble High Court of Karnataka vide Order dated: 18.11.2020 in WP No. 17841/2018 read at ref (1) above.

The processing and consideration of the application was taken up as per provisions of the Karnataka Preservation of Trees Act, 1976 (hereinafter mentioned as "the Act") and the Memorandum of Procedure (hereinafter mentioned as "the MOP") formulated by the Tree Expert Committee (hereinafter mentioned as "the TEC"). As stipulated under Section 8(3)(vii) of

the Act, a public notice in Template No. 1 of the MOP was issued duly inviting the objections from the public, as the total number of trees proposed to be felled are more than 50. The public notice appeared in The Times of India, The Hindu and Udayavani Newspapers on 03-12-2020. The details of the 700 trees sought to be removed published on the website of BBMP, as per the MOP.

In response to the public notice, one objection and one suggestion was received from the general public. The suggestion is for translocating some trees based on assessment by experts/NGOs using objective criteria. In particular Arakere Lake has been suggested as a possible site for the translocation. The observation is in support of the project. Objection and observation both were considered carefully, and proceedings regarding consideration along with a tabular statement showing the objections from the public, and remarks and findings of the undersigned for each specific objection and comment were prepared on 15.04.2021 and was submitted to Tree Expert Committee.

In the meanwhile BMRCL has applied an I.A.10/2020 to seeking permission for relaxation of 872 number exempted species as per the Karnataka Preservation of tree Act 1976. After so many hearings the Hon'ble High Court of Karnataka has given orders to the BMRCL as below;

*"As per the TEC report dated 18th March 2021 a recommendation was made to permit felling of 800 trees out of 872 trees which were claimed to be exempted. For the time being, 32 trees which are not exempted out of 872 trees will not be touched by BMRCL and out of 800 trees permitted to be felled, BMRCL will fell only 768 trees as per the said report of TEC."*

*"In view of the statement has made by the learned senior counsel appearing for BMRCL, for the time being, 18 trees(which have to be relocated)shall not be touched. We permit the felling of 768 trees subject to all terms and conditions to be complied with. The assurances in the aforesaid affidavit are accepted as the undertakings of BMRCL"*

As per BMRCL I.A.10/2020 out of 700 trees 629 trees are exempted and remaining trees in the project area sought to be removed. As per the court Direction based on the report of TEC submitted to Hon'ble high Court dated 18th March 2021 regarding exempted species only 604 trees were exempted in Kothnur Depot as per the enumeration list and also BMRCL requested to this office seeking permission for the felling of 604 exempted trees at Kothnur Depot as per the Hon'ble high Court of Karnataka order dated 22-04-2021 in WP No.17841/2018(PIL).

The TEC has further concluded that 02 trees are healthy and suitable for translocation(SI. No 309 in Block-A & SI.No. 73- in Block-C). Out of 18 trees said for translocation, above mentioned two(02) trees shall not be touched by BMRCL for the time being as per the orders of Hon'ble High Court of Karnataka dated 22-04-2021 in WP No.17841/2018(PIL). So the two(02) trees are kept in abeyance until the further orders of Hon'ble High Court of Karnataka.

Hence, the following order.

### **Order**

1. Permission is hereby granted for removal of Six Hundred and four trees by way of felling as listed with justification of Tree Expert Committee(TEC) is appended to this Official Memorandum as **Appendix-1.**
2. Out of 18 trees said for translocation, two(02) trees(SI. No 309 in Block-A & SI.No. 73- in Block-C) shall not be touched by BMRCL for the time being as per the orders of Hon'ble High Court of Karnataka dated 22-04-2021 in WP No.17841/2018(PIL). So the two(02) trees are kept in abeyance until the further orders of Hon'ble High Court of Karnataka.
3. This order will come into effect fifteen (15) days from the date of uploading of the order on the websites of BBMP and serving by email on the petitioners in WP 17841/2018.
4. The order is subject to following directions to BMRCL.

#### **A. Compensatory Plantation:**

- i. Arrange compensatory Afforestation of 6040 tall and healthy saplings, i.e., @ 10 saplings for each tree removed within 6 months from the date of the removal.
- ii. Submit a plan for the compensatory plantation within 2 months from the date of this order.

#### **B. Care & Maintenance of compensatory plantation, and their Reporting:**

- i. BMRCL should ensure proper and effective care and maintenance of the compensatory plantation for a period of 3 years.

- ii. BMRCL should also submit reports regarding condition of the compensatory plantation every quarter for a period of 3 years to the undersigned.

**C. Storage & disposal of felled trees:**

- i. The extracted wood from 604 trees to be felled should be deposited at Jarakbande Kaval Tenkey Depot with the Bengaluru Range Forest Officer through Range Forest Officer, Kaggalipura for disposal.

- Tree is present in block (Block A) plantation area which is identified for construction of Metro Depot (construction activities include mass excavation of soil from the entire project area followed by other built-up structures of Depot), therefore the tree cannot be retained. The tree is multi forked and in addition all the trees in the block plantation are very close to each other and hence none of the trees consist of desirable ball of earth for translocation. The tree is recommended for Felling.

- Tree is present in block (Block A) plantation area which is identified for construction of Metro Depot (construction activities include mass excavation of soil from the entire project area followed by other built-up structures of Depot), therefore the tree cannot be retained. All the trees in the block plantation are very close to each other and hence none of the trees consist of desirable ball of earth for translocation. The tree is recommended for Felling.

**Justification**

- Tree is present in the project area earmarked for construction. These are coppices, tree having multiple coppice. These trees have exceptionally sensitive root systems and if damaged will affect the growth and survival. Hence, cannot be transplanted, whose survival chances are very low. Hence, the tree is recommended for felling.
- Tree is present in the project area earmarked for construction. These are coppices, tree having multiple coppice. These trees have exceptionally sensitive root systems and if damaged will affect the growth and survival. Hence, cannot be transplanted, whose survival chances are very low. Hence, the tree is recommended for felling.
- Tree is present in the project area earmarked for construction. These are coppices, tree having multiple coppice. These trees have exceptionally sensitive root systems and if damaged will affect the growth and survival. Hence, cannot be transplanted, whose survival chances are very low. Hence, the tree is recommended for felling.

- Tree is present in the project area earmarked for construction. These are coppices, tree having multiple coppice. These trees have exceptionally sensitive root systems and if damaged will affect the growth and survival. Hence, cannot be transplanted, whose survival chances are very low. Hence, the tree is recommended for felling.

- Tree is present in the project area earmarked for construction. These are coppices, tree having multiple coppice. These trees have exceptionally sensitive root systems and if damaged will affect the growth and survival. Hence, cannot be transplanted, whose survival chances are very low. Hence, the tree is recommended for felling.

- Tree is present in the project area earmarked for construction. These are coppices, tree having multiple coppice. These trees have exceptionally sensitive root systems and if damaged will affect the growth and survival. Hence, cannot be transplanted, whose survival chances are very low. Hence, the tree is recommended for felling.

- Justification**
- Tree is present in the project area earmarked for construction. These are coppices, tree having multiple coppice. These trees have exceptionally sensitive root systems and if damaged will affect the growth and survival. Hence, cannot be transplanted, whose survival chances are very low. Hence, the tree is recommended for felling.

- Tree is present in the project area earmarked for construction. These are coppices, tree having multiple coppice. These trees have exceptionally sensitive root systems and if damaged will affect the growth and survival. Hence, cannot be transplanted, whose survival chances are very low. Hence, the tree is recommended for felling.

- Tree is present in the project area earmarked for construction. These are coppices, tree having multiple coppice. These trees have exceptionally sensitive root systems and if damaged will affect the growth and survival. Hence, cannot be transplanted, whose survival chances are very low. Hence, the tree is recommended for felling.

- Tree is present in the project area earmarked for construction. These are coppices, tree having multiple coppice. These trees have exceptionally sensitive root systems and if damaged will affect the growth and survival. Hence, cannot be transplanted, whose survival chances are very low. Hence, the tree is recommended for felling.

- Tree is present in the project area earmarked for construction. These are coppices, tree having multiple coppice. These trees have exceptionally sensitive root systems and if damaged will affect the growth and survival. Hence, cannot be transplanted, whose survival chances are very low. Hence, the tree is recommended for felling.

- Tree is present in the project area earmarked for construction. These are coppices, tree having multiple coppice. These trees have exceptionally sensitive root systems and if damaged will affect the growth and survival. Hence, cannot be transplanted, whose survival chances are very low. Hence, the tree is recommended for felling.

- Tree is present in the project area earmarked for construction. These are coppices, tree having multiple coppice. These trees have exceptionally sensitive root systems and if damaged will affect the growth and survival. Hence, cannot be transplanted, whose survival chances are very low. Hence, the tree is recommended for felling.

- Tree is located within the project area  
Tree is having multiple branches from the base of the stem. Sapota is a slow growing tree and has extensive root system. Hence, appropriate root ball of earth cannot be excavated. Pruning of sapota tree also affects the further growth of this tree.  
Hence, this tree is not recommended for translocation.

- Tree is located within the project area
- Tree is having multiple branches from the base of the stem. Sapota is a slow growing tree and has extensive root system. Hence, appropriate root ball of earth cannot be excavated. Pruning of sapota tree also affects the further growth of this tree. Hence, this tree is not recommended for translocation.

- Tree is located within the project area
- Tree is having multiple branches from the base of the stem. Sapota is a slow growing tree and has extensive root system. Hence, appropriate root ball of earth cannot be excavated. Pruning of sapota tree also affects the further growth of this tree. Hence, this tree is not recommended for translocation.

- Tree is located within the project area.
- Tree is matured and it has multiple branches (5 Nos.) and three branches are completely dried and fallen on the surface. Hence, this tree is recommended for felling.

- Tree is located within the project area
- Tree is matured and it is having forked branches, one branch is dead and lying. Hence, this tree is recommended for felling.

- Tree is present in the project area earmarked for construction. These are coppices, tree having multiple coppice. These trees have exceptionally sensitive root systems and if damaged will affect the growth and survival. Hence, cannot be transplanted, whose survival chances are very low. Hence, the tree is recommended for felling.

- Tree is located within the project area  
Tree is having multiple branches from the base of the stem. Sapota is a slow growing tree and has extensive root system. Hence, appropriate root ball of earth cannot be excavated. Pruning of sapota tree also affects the further growth of this tree. Hence, this tree is not recommended for translocation.
