*Appendix G***Standards and Specifications**

The quantity of MSW generation, number of labours requirement, Number of vehicles requirement is based on the following normative standards. The bidder is required to adhere to the standards and the requirement shall not be less than the numbers mentioned in the Appendix 2.

<b>Normative standards</b>		
<b>Waste generation assumption</b>		
<b>Particulars</b>	<b>Approximate Quantity of waste generation per unit</b>	<b>Remarks</b>
Households	1 kg	<input type="checkbox"/>
Commercial establishment (Small shops, Institutions, industries)	2 kg	<input type="checkbox"/>
Small hotels	75 kg	<input type="checkbox"/>
Large hotels	200 kg	<input type="checkbox"/>
Choultries/marriage halls	1*100 functions * 500 kg per function	50 tons per annum/4.175 tones per month/138 kg per day
Small markets	200 kg	If the ward has the institutions/industries or any other generators generating the MSW, based on the quantity of waste generation use the standard fixed appropriate to that.
Large markets	1-2 tons	
Large temples	150 kg	
Small temples	30 kg	
Street sweeping	50 kg per km	
Auto tipper/Goods auto	600 households one Auto tipper/Goods auto	

	□
Compactors	10-12 tons per trip
Closed Tipppers	5-7.5 tons per trip

**1. Door-to-door collection of Municipal Solid Waste (MSW) in the BBMP and transportation of the same to designated locations**

The vehicles and equipment to be deployed for the execution of the Package should be of the following category:

Sl. No.	Vehicle/Equipment	Coverage (Households per day)
1	Auto tipper/Goods autos	600
2	4 bins pushcarts	200

The MSW collection needs to be done by deploying either one of the different types of vehicles / equipment indicated above or by deployment of an optimal combination of a few or all of the above.

The number of vehicles / equipment required would be calculated based on the coverage indicated in the above table. The method for calculation of the requirement for 5000 households (considered as an example) is indicated below:

Requirement in case only auto tipper/Goods autos are to be deployed

Requirement = Number of households divided by the coverage of an auto tipper/Goods auto (as indicated in the table)

$$= 10000 / 600$$

$$= 17 \text{ numbers}$$

Requirement in case a combination of 75% of auto tipper/Goods autos and 25% of Pushcarts is planned to be deployed

Requirement for one of the combinations (10000 households to be covered by deploying auto tipper/Goods autos and use of pushcarts for collection of MSW from the remaining households) could be

$$\text{Auto tipper/Goods autos} = 7500 / 600 = 13 \text{ numbers}$$

Pushcarts =  $2500 / 200 = 13$  number (approximately)

## 2. Transportation of Primary collection waste, bulk waste and street sweeping waste Quantity of waste generation tons per day

Primary and bulk waste generation	16.205	
Street sweeping	5.625	
<b>Total</b>	<b>21.83</b>	<b>Tons per day</b>

Assuming 70% of the total Primary collection & bulk waste generation will be wet waste and 30% will be dry waste.

Assuming 5% of street sweeping waste will be wet waste, 5% will be dry waste and remaining 90% will be inert waste.

Total quantity of wet waste	11.62475 ( $16.205 \times 0.70 + 5.625 \times 0.05$ )
Total quantity of dry waste	5.953 ( $16.205 \times 0.30 + 5.625 \times 0.05$ )
Total quantity of inert waste	5.0625 ( $5.625 \times 0.9$ )

One Compactor can Transport approximately 11 tons of wet waste per trip

One Tipper lorry can Transport approximately 5 tons of inert waste per trip

Therefore number of compactors required=  $(10.81/11)$  1.056795455 1

Therefore number of Tippers required=  $(5.06/5)$  1.0125 1

## Collection of MSW from the bulk generators of MSW in the BBMP and transportation of the same to designated locations
